On your task bar icon tray, click on the Wifi icon.

Then choose "AirPennNet" and click "Connect"

Then enter your PennKey username and password

If that doesn't work, "forget" the wifi network first, then try to connect again. Here's how:

FORGETTING WIFI

Click on the Wifi icon again, and choose "Network settings"

(continued next page)
Then click "Manage Wi-Fi settings" (you may need to scroll down if you have a long list of networks)

Then click on "AirPennNet", and click the "Forget" button, then **RESTART** the computer.

Give and get Internet access without telling each other your shared passwords. You’ll get connected to Wi-Fi networks your contacts share, and they’ll get connected to networks you share.

**Manage known networks**
