Fortran 90 5 Day Course — Instructions for Use

AC Marshall

September 2, 1997

The development of this course was funded by UK HEFC/JISC under the New Technologies Initiative.

This box contains:

- ☐ front page,
- ☐ this page,
- ☐ syllabus,
- ☐ 2-up student notes (one booklet),
- ☐ student notes (loose leaf),
- ☐ OHP slides (paper copies),
- ☐ 2-up lectures guide (one booklet),
- ☐ tutorial sheets (loose leaf),
- ☐ 2-up tutorial sheets with answers (one booklet),
- ☐ tutorial sheets with answers (loose leaf),
- ☐ resource list (booklet),
- ☐ resource list (loose leaf).

In order to prepare the course for use it will be necessary to do the following:

1. make transparency copies of the OHP slides, this can be done on a photocopier.
2. make bound copies of the student notes (1 per course attendee).
3. make multiple copies of the tutorial sheets. Each tutorial session begins a new page and it is recommended that the students only be given one tutorial at a time.

4. study the lecturers guide. This booklet contains an (almost) exact copy of the slide followed by explanatory notes. The notes are very detailed and should discuss all the points pertinent to the accompanying slide. Each slide / notes pair begins on the left hand side page and continues onto the facing page. In a small number of cases the explanatory text may continue overleaf.

5. make copies of the resource list to hand out to the attendees. (The resource list provides information about Fortran 90 books, Journals, Email lists, World Wide Web sites and the locations of the Fortran FAQs.)

Good luck and happy teaching!

Any mistakes / inconsistencies should be notified to `hpccourses@liv.ac.uk`.
