SEASwerks
Michael Coopersmith
Advisor: Pat Palmer

SEASwerks is a distributed information system usable by faculty and students of the School of Engineering and Applied Science at the University of Pennsylvania. This system’s purpose is to provide these people with immediate reporting and viewing of employment trends of students during their years at school and for several years after graduation.

Edit personal information about the user: name, major(s), and e-mail address

Get statistical information about the jobs of students registered in the system

Add and edit the user’s jobs

Get dynamically generated pie charts of the breakdown of students in the system: major, company industry, or job function

Add a new company to the database or choose one from the list

Search for a student by typing in the name while the list of matching students is dynamically updated

Get statistical information about the jobs of students registered in the system as well as the list of students that match the query

Create new students and edit those that are already in the system
