The variation in average grades among the University’s different disciplines leads some to speculate about the uses of grades.

By Caryn Tamber

Penn and the other Ivy League schools have composed grades across departments and have maintained their grading standards, so trends in grading seem to operate consistently across the country. Psychology Professor and Committee on Undergraduate Education Chairman James Beeman added that the universities value different sets of students: some are looking for intellectually engaging classes built on an official stance, while the sciences look for intellectual excellence. The grading systems have become a sense of individual achievement.

Within the College of Arts and Sciences, the numbers show that average grades in un-dergraduate natural science classes are consistently lower than grades in small classes. The variation in average grades among different disciplines leads some to speculate about the uses of grades.
