Non-Integer and Multi-rate Sampling

# Lecture Outline

---

- ❑ Review: Downsampling/Upsampling
- ❑ Non-integer Resampling
- ❑ Multi-Rate Processing
  - Interchanging Operations

# Downsampling

- Definition: Reducing the sampling rate by an integer number

$$X_d(e^{j\omega}) = \frac{1}{M} \sum_{i=0}^{M-1} X(e^{j(\frac{\omega}{M} - \frac{2\pi}{M}i)})$$

stretch by M      replicate

# Example

$$X_d(e^{j\omega}) = \frac{1}{M} \sum_{i=0}^{M-1} X \left( e^{j \left( \frac{\omega}{M} - \frac{2\pi}{M} i \right)} \right)$$

# Example

$$X_d(e^{j\omega}) = \frac{1}{M} \sum_{i=0}^{M-1} X \left( e^{j \left( \frac{\omega}{M} - \frac{2\pi}{M} i \right)} \right)$$

# Example

# Upsampling

---

- Definition: Increasing the sampling rate by an integer number

$$x[n] = x_c(nT)$$

$$x_i[n] = x_c(nT') \quad \text{where } T' = \frac{T}{L} \quad L \text{ integer}$$

# Frequency Domain Interpretation

$$\begin{aligned} X_e(e^{j\omega}) &= \sum_{n=-\infty}^{\infty} \underbrace{x_e[n]}_{\neq 0 \text{ only for } n=mL \text{ (integer } m)} e^{-j\omega n} \\ &= \sum_{m=-\infty}^{\infty} \underbrace{x_e[mL]}_{=x[m]} e^{-j\omega mL} = X(e^{j\omega L}) \end{aligned}$$

Compress DTFT by a factor of L!

# Example

# Interpolation and Decimation

---

decimator

interpolator

# Interpolation Filter Example 1

- This time we use a filter of length 7 with the effect of linear interpolation

# Interpolation Filter Example 1

# Interpolation Filter Example 1

$*$   
(convolve)

# Interpolation Filter Example 1

$*$   
(convolve)

# Linear Interpolation -- Frequency Domain

$$x_i[n] = x_e[n] * h_{lin}[n]$$

$$h_{lin}[n] = \begin{cases} 1 - |n|/L, & |n| \leq L, \\ 0, & \text{otherwise,} \end{cases}$$

DTFT  $\Rightarrow$

## Interpolation Filter Example 2

- ❑ In this example, we interpolate a signal  $x(n)$  by a factor of 4.
- ❑ We use a linear phase Type I FIR lowpass filter of length 21.

# Interpolation Filter Example 2

$*$   
(involve)

# Linear Interpolation -- Frequency Domain

$$x_i[n] = x_e[n] * h_{lin}[n]$$

$$h_{lin}[n] = \begin{cases} 1 - |n|/L, & |n| \leq L, \\ 0, & \text{otherwise,} \end{cases}$$

DTFT  $\Rightarrow$

## Interpolation Filter Example 3

---

- ❑ When interpolating a signal  $x(n)$ , the interpolation filter  $h(n)$  will in general change the samples of  $x(n)$  in addition to filling in the zeros.
- ❑ Can a filter be designed so as to preserve the original samples  $x(n)$ ?

## Interpolation Filter Example 3

---

- ❑ When interpolating a signal  $x(n)$ , the interpolation filter  $h(n)$  will in general change the samples of  $x(n)$  in addition to filling in the zeros.
- ❑ Can a filter be designed so as to preserve the original samples  $x(n)$ ?
- ❑ To be precise, if  $y(n) = h(n) * [\uparrow 2] x(n)$  then can we design  $h(n)$  so that  $y(2n) = x(n)$ ?

## Interpolation Filter Example 3

---

- ❑ When interpolating a signal  $x(n)$ , the interpolation filter  $h(n)$  will in general change the samples of  $x(n)$  in addition to filling in the zeros.
- ❑ Can a filter be designed so as to preserve the original samples  $x(n)$ ?
- ❑ To be precise, if  $y(n) = h(n) * [\uparrow 2] x(n)$  then can we design  $h(n)$  so that  $y(2n) = x(n)$ ?
  - Or more generally, so that  $y(2n + n_o) = x(n)$  ?

# Interpolation Filter Example 3

- When interpolating by a factor of 2, if  $h(n)$  is a half-band filter, then it will not change the samples  $x(n)$ .
- A  $n_o$ -centered half-band filter  $h(n)$  is a filter that satisfies:

$$h(n) = \begin{cases} 1, & \text{for } n = n_o \\ 0, & \text{for } n = n_o \pm 2, 4, 6, \dots \end{cases}$$

- That means, every second value of  $h(n)$  is zero, except for one such value, as shown in the figure.

# Interpolation Filter Example 3

- When interpolating by a factor of 2, if  $h(n)$  is a half-band filter, then it will not change the samples  $x(n)$ .
- A  $n_o$ -centered half-band filter  $h(n)$  is a filter that satisfies:

$$h(n) = \begin{cases} 1, & \text{for } n = n_o \\ 0, & \text{for } n = n_o \pm 2, 4, 6, \dots \end{cases}$$

- That means, every second value of  $h(n)$  is zero, except for one such value, as shown in the figure.

- $$h(n) = \begin{cases} 1, & \text{for } n = n_o \\ 0, & \text{for } n = n_o \pm 2, 4, 6, \dots \end{cases}$$
- That means, every second value of  $h(n)$  is zero, except for one such value, as shown in the figure.

# Interpolation Filter Example 4

---

- ❑ When interpolating a signal  $x(n)$  by a factor  $L$ , the original samples of  $x(n)$  are preserved if  $h(n)$  is a Nyquist- $L$  filter.
- ❑ A Nyquist- $L$  filter simply generalizes the notion of the halfband filter to  $L > 2$ .

# Interpolation Filter Example 4

- ❑ When interpolating a signal  $x(n)$  by a factor  $L$ , the original samples of  $x(n)$  are preserved if  $h(n)$  is a Nyquist- $L$  filter.
- ❑ A Nyquist- $L$  filter simply generalizes the notion of the halfband filter to  $L > 2$ .
- ❑ A (0-centered) Nyquist- $L$  filter  $h(n)$  is one for which

$$h(Ln) = \delta(n).$$

# Interpolation Filter Example 4

- ❑ When interpolating a signal  $x(n)$  by a factor  $L$ , the original samples of  $x(n)$  are preserved if  $h(n)$  is a Nyquist- $L$  filter.
- ❑ A Nyquist- $L$  filter simply generalizes the notion of the halfband filter to  $L > 2$ .
- ❑ A (0-centered) Nyquist- $L$  filter  $h(n)$  is one for which

$$h(Ln) = \delta(n).$$

# Non-integer Resampling

---

# Non-integer Resampling

---

□  $T' = TM/L$

# Non-integer Resampling

□  $T' = TM/L$

- Upsample by  $L$ , then downsample by  $M$

# Non-integer Resampling

□  $T' = TM/L$

- Upsample by  $L$ , then downsample by  $M$

Or,

# Example

□  $T' = 3/2T \rightarrow L=2, M=3$

# Example

□  $T' = 3/2T \rightarrow L=2, M=3$

Subsampling  $M=3$

expanding  $L=2$

LP filtering

$$\tilde{X}_i = H_d X_e$$

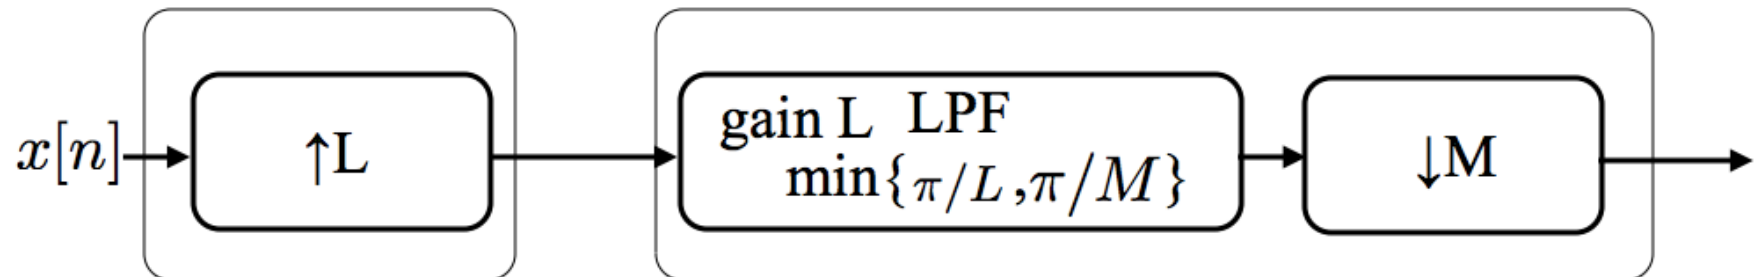

# Non-integer Sampling

□  $T' = TM/L$

- Downsample by  $M$ , then upsample by  $L$ ?

Or,

# Example

---

- What if we want to resample by 1.01T?

# Example

---

- What if we want to resample by 1.01T?
  - Upsample by  $L=100$
  - Filter  $\pi/101$
  - Downsample by  $M=101$

# Example

---

- ❑ What if we want to resample by 1.01T?
  - Upsample by  $L=100$
  - Filter  $\pi/101$  (\$\$\$\$\$)
  - Downsample by  $M=101$
  
- ❑ Fortunately there are ways around it!
  - Called multi-rate signal processing
  - Uses compressors, expanders and filtering

# Interchanging Operations

LTI?

“expander”

Upsampling

- expanding in time
- compressing in frequency

“compressor”

Downsampling

- compressing in time
- expanding in frequency

not LTI!

$$\begin{aligned} Y(e^{j\omega}) &= H(e^{j\omega}) \left( \frac{1}{M} \sum_{i=0}^{M-1} X \left( e^{j(\frac{\omega}{M} - \frac{2\pi i}{M})} \right) \right) \\ &= \frac{1}{M} \sum_{i=0}^{M-1} \underbrace{H \left( e^{j(\omega - 2\pi i)} \right)}_{H(e^{j\omega})} X \left( e^{j(\frac{\omega}{M} - \frac{2\pi i}{M})} \right) \\ &= \frac{1}{M} \sum_{i=0}^{M-1} H \left( e^{jM(\frac{\omega}{M} - \frac{2\pi i}{M})} \right) X \left( e^{j(\frac{\omega}{M} - \frac{2\pi i}{M})} \right) \end{aligned}$$

# Interchanging Operations - Compressor

# Interchanging Operations - Compressor

$$Y(e^{j\omega}) = \frac{1}{M} \sum_{i=0}^{M-1} H\left(e^{jM\left(\frac{\omega}{M} - \frac{2\pi i}{M}\right)}\right) X\left(e^{j\left(\frac{\omega}{M} - \frac{2\pi i}{M}\right)}\right)$$

$$V(e^{j\omega}) = H(e^{j\omega M})X(e^{j\omega})$$

$$\tilde{Y}(e^{j\omega}) = \frac{1}{M} \sum_{i=0}^{M-1} V\left(e^{j\left(\frac{\omega}{M} - \frac{2\pi i}{M}\right)}\right)$$

# Interchanging Operations - Summary

Filter and expander

Expander and expanded filter\*

Compressor and filter

Expanded filter\* and compressor

\*Expanded filter = expanded impulse response, compressed freq response

# Multi-Rate Signal Processing

- What if we want to resample by  $1.01T$ ?
  - Expand by  $L=100$
  - Filter  $\pi/101$  (\$\$\$\$\$)
  - Compress by  $M=101$

$$x[n] \rightarrow H(z) \rightarrow \uparrow L \rightarrow y[n] \quad \equiv \quad x[n] \rightarrow \uparrow L \rightarrow H(z^L) \rightarrow y[n]$$

$$x[n] \rightarrow \downarrow M \rightarrow H(z) \rightarrow y[n] \quad \equiv \quad x[n] \rightarrow H(z^M) \rightarrow \downarrow M \rightarrow y[n]$$

# Big Ideas

---

- ❑ Non-integer Resampling
- ❑ Multi-Rate Processing
  - Interchanging Operations

$$x[n] \rightarrow H(z) \rightarrow \uparrow L \rightarrow y[n] \quad \equiv \quad x[n] \rightarrow \uparrow L \rightarrow H(z^L) \rightarrow y[n]$$

$$x[n] \rightarrow \downarrow M \rightarrow H(z) \rightarrow y[n] \quad \equiv \quad x[n] \rightarrow H(z^M) \rightarrow \downarrow M \rightarrow y[n]$$
