

 The universe of possible implementations (design space) is large

 Many dimensions to explore

Design Space

· Have many choices for implementation

· Our freedom to impact implementation

· Formulate carefully

nn ESE532 Fall 2017 - DeHon

- Approach systematically
- Use modeling along the way for guidance

3

5

Design Space

· Ideally

n ESE532 Fall 2017 -- DeHor

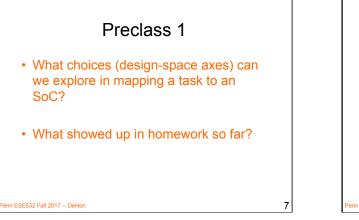

- Each choice orthogonal axis in highdimensional space
- Want to understand points in space
- Find one that bests meets constraints and goals
- Practice
 - Seldom completely orthogonal
 - Requires cleverness to identify dimensions
 - Messy, cannot fully explore
- But...can understand, prioritize, guide

costs

- Alternatives to try

- Mapping options

- Parameters to tune

Design Space Explore

→more opportunities to find good solutions

· Think systematically about how might

map the application

· Understand tradeoffs

· Large design space

Avoid overlooking options

Design-Space Choices

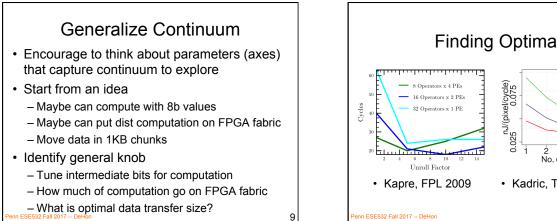

- · Type of parallelism
- · How decompose / organize parallelism
- Area-time points (level exploited)
- · What resources we provision for what parts of computation
- · Where to map tasks
- How schedule/order computations
- · How synchronize tasks
- · How represent data
- · Where place data; how manage and move

8

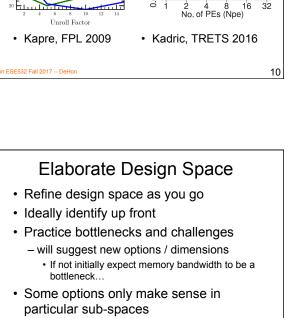

winf N

> 16 32

· What precision use in computations

11

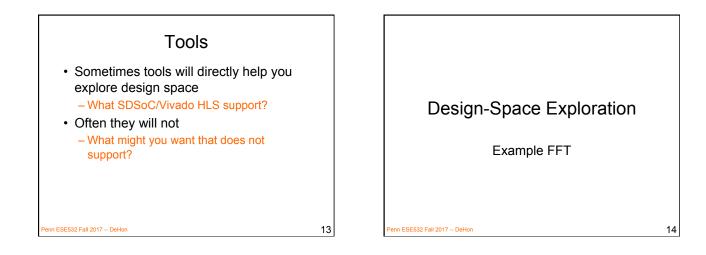

nJ/(pixel/cycle) 0.025 0.075

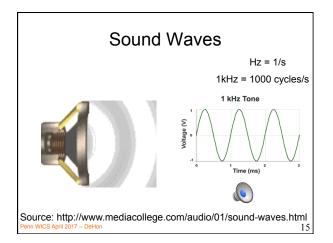

- Bitwidth optimization not a big issue on the 64b processor

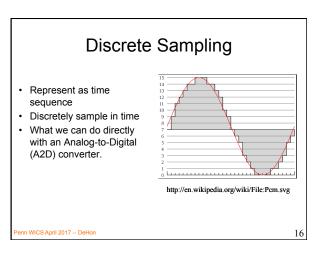

· More interesting on vector, FPGA nn ESE532 Fall 201

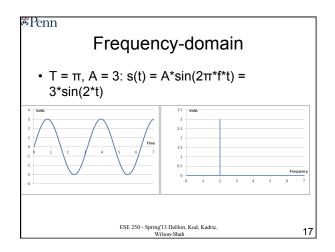

Reduce bottlenecks nn ESE532 Fall 2017 - DeHon

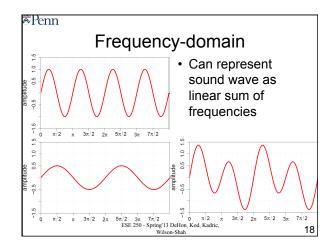

2

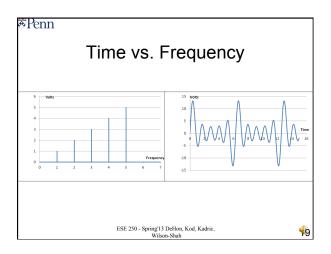

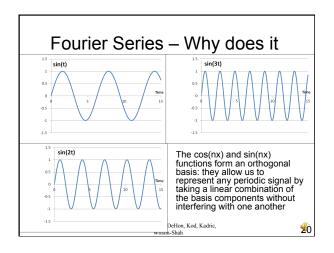

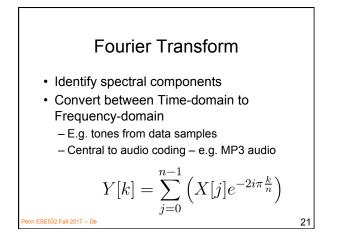

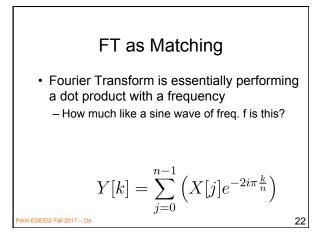

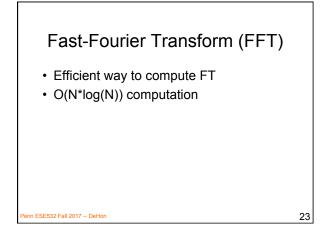

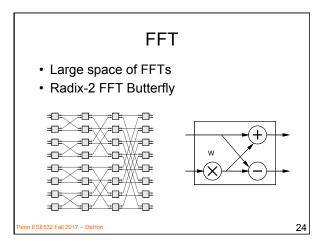

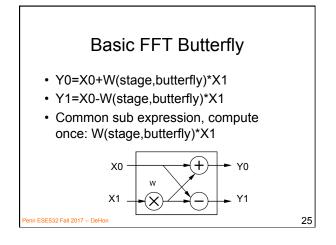

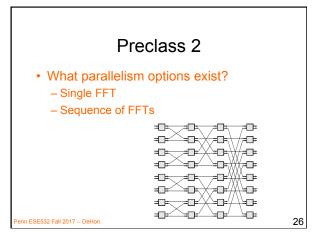

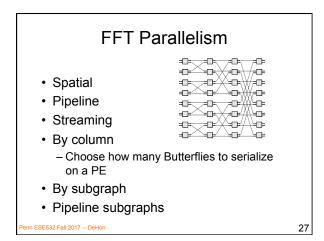

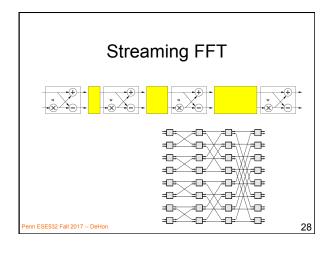

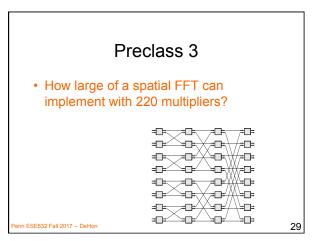

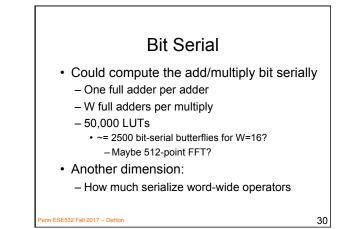

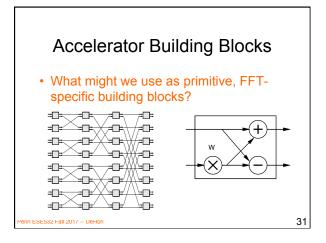

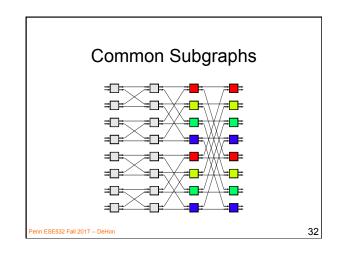

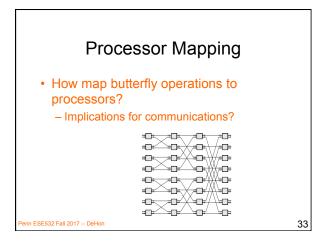

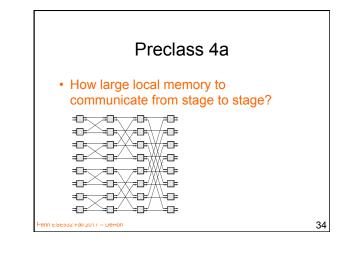

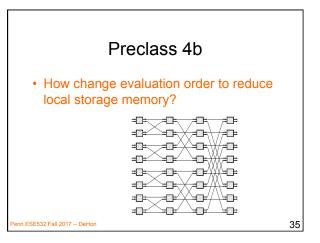

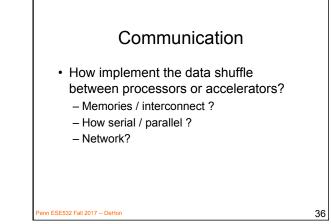

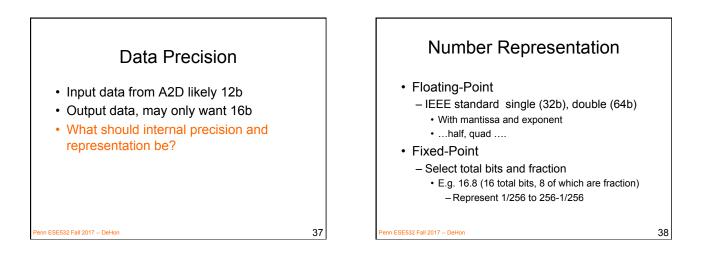

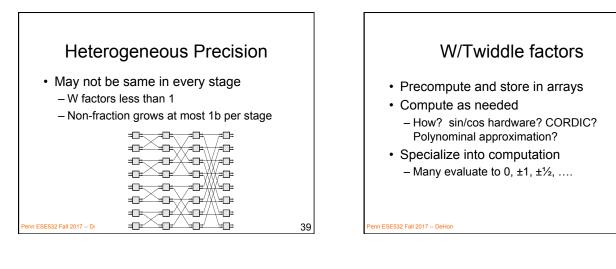

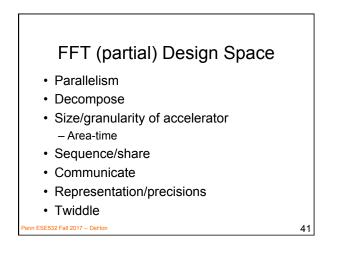

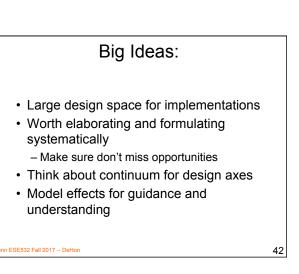

Admin

- 1st milestone parallelism feedback
 Should have seen Friday evening
- 2nd milestone due Friday
 Asks you to identify design space

Penn ESE532 Fall 2017 – DeHon
