Consider the computation:

Assume:

- Both operations (green circle and pink square) take 1 unit of time to complete

1. How fast can you perform the computation using any number of units of each type? $\square$
2. What is the minimum number of units of each type necessary to achieve the bound above?

3. How many cycles do you need to perform this computation with only one of each type

| cycle | green circle | pink square |
| :---: | :---: | :---: |
| 1 |  |  |
| 2 |  |  |
| 3 |  |  |
| 4 |  |  |
| 5 |  |  |
| 6 |  |  |
| 7 |  |  |
| 8 |  |  |

| cycle | green circle | pink square |
| :---: | :--- | :--- |
| 9 |  |  |
| 10 |  |  |
| 11 |  |  |
| 12 |  |  |
| 13 |  |  |
| 14 |  |  |
| 15 |  |  |
| 16 |  |  |
