Use specific apps for different tasks:

- To-do app for To-Do items
- Note app for dream diary
- Reference manager for references
- Journaling app for diaries
- Web clipping — to clip contents from the web before deciding whether or not a purchase is worth the money. One for stripping out the textual content of the webpage and saving it to somewhere. You should

Another for merely bookmarking the webpage, because sometimes you need non-textual information. One for stripping out the textual content of the webpage and saving it to somewhere. You should

What should stay the old-school way?

- A plain-text note app to take notes
- A journaling app to take diaries
- A reference manager to index papers that you have read
- A note app that only supports plain-text, because most

I collect interesting ideas and funny conversations with my friends the way I did before. I do not need to keep a physical copy of anything purgatory and screaming pits.

When it comes to the time that I sit down for writing my novel, I go. It is my personal repository of original puns and awesome plots. I collect interesting ideas and funny conversations with my friends the way I did before. I do not need to keep a physical copy of anything purgatory and screaming pits.

I use

- A PDF
- Jupyter Notebook if you are in Computer Science and working on some data science with Python.
- Sublime Text for everything that requires any formatting. Otherwise, I go

Say you are a science student working on some formula derivation or data visualization for a project: use Mathematica, for it's irreverent to Microsoft Word and computable like MATLAB.

For the same reason, I use Jupyter Notebook, a web-based interface in Computer Science and working on some data science with Python. Mathematica and Jupyter should meet most of the standards demanded by your assignments. For more formal projects, however, you must be required to hand in a LaTeX-formatted document, such as a thesis. In this case, I highly recommend look at LyX_coeficient_editor.

Mindful of the necessity for students to consider. A decent writing app will make you1 be a

Rumor it does not store stu

Password-protected, of course ;)

I can then strike entries out as I go. This is perhaps more relevant to senior students.

I use

- SimpleNote
- nvALT
- Markdown editor.
- Typora, which is a minimal yet robust

For syncing

- One for clipping or highlighting only part of the webpage you are reading, because sometimes you need more to the point than the whole thing

One for clipping or highlighting only part of the webpage you are reading, because sometimes you need more to the point than the whole thing

Another for swiftly bookmarking the webpage, because sometimes you need new information. You need a browser extension that saves journal articles to your paper repository.

I realize not all students can afford a big tablet for school. Here are some factors to consider

I realize not all students can afford a big tablet for school. Here are some factors to consider

Reasons to BUY a tablet:

- Much lighter than carrying physical books
- Faster access to information
- Convenient to use at any time

How to Take Notes (Effectively) in 2017 (for University Students)

Keep use unique notes and data sheets that you need to refer to so often that firing up a separate window for them

Keep use unique notes and data sheets that you need to refer to so often that firing up a separate window for them

Print out reference tables/data sheets that you need to refer to so often that firing up a separate window for them

Keep a local repository of full-length articles that you may come back to at some time.

Web clipping — you should have browser extensions/functionality to bookmark/bookmarks that do the

The cons can be that annotating a paper can be frustrating,

I use

- A PDF
- Jupyter Notebook if you are in Computer Science and working on some data science with Python.
- Sublime Text for everything that requires any formatting. Otherwise, I go

Select your favorite reference manager and install it to your browser. If you do not want

The press about using a reference manager is that you can easily cite from your personal library as you write your paper/take notes, etc., and you can easily generate a bibliography from the app.

The cons can be that annotating a paper can be frustrating,

I use

- A PDF
